EXAMINER

SCHUBERT, KEVIN R

ART UNIT PAPER NUMBER

2137

DATE MAILED: 11/23/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b>		<b>Applicant(s)</b>	
	10/034,952		DEBIEZ ET AL.	
	<b>Examiner</b>		<b>Art Unit</b>	
	Kevin Schubert		2137	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 19 September 2005.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-13 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-4,6,9,10 and 13 is/are rejected.
- 7) ☒ Claim(s) 5,7,8,11 and 12 is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 2137

**DETAILED ACTION**

Claims 1-13 have been considered. Claims 1-4,6,9-10, and 13 have been rejected. Claims 5,7-8, and 11-12 have been objected to but marked as allowable if rewritten in independent form and the 112 2<sup>nd</sup> issue of claim 1 is resolved.

5

***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the  
10 finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/19/05 has been entered.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

15 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to  
20 particularly point out and distinctly claim the subject matter which applicant regards as the invention. In the preamble, the phrase "the time source comprising" is indefinite. Preceding the phrase, the applicant has disclosed two time sources: a trusted high stability time source and a trusted external time source. Therefore, it is unclear whether the phrase "the time source comprising" refers to the trusted high stability time source or the trusted external time source. The examiner assumes, for examination purposes, that  
25 the phrase "the time source comprising" refers to the trusted high stability time source. Appropriate correction is required.

***Allowable Subject Matter***

Art Unit: 2137

Claims 5,7-8, and 11-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The statement of allowability of these claims assumes the 112 2<sup>nd</sup> issue noted above is resolved.

5

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

10

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

15

Claims 1-2,4, and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wepler, U.S. Patent No. 5,661,700, in view of Schneier (Schneier, Bruce. Applied Cryptography. Washington, DC. 1996. pages 75-78) in further view of Hartman, U.S. Patent No. 5,500,897.

20

As per claim 1, the applicant describes a trusted high stability time source for use with a digital time stamping service and a trusted external time source, the time source comprising the following limitations which are met by Wepler in view of Schneier in further view of Hartman:

a) a private time source in the form of a local running clock and indicating a private time (Wepler: Col 5, line 1 to Col 7, line 34);

25

b) a published time source in the form of a local running clock and indicating a published time (Wepler: Col 5, line 1 to Col 7, line 34);

c) at least one power supply arranged to power the private time source and the published time source (Wepler: Col 5, line 1 to Col 7, line 34);

Art Unit: 2137

d) control logic programmed to perform a time stamping operation by receiving a message, appending the published time to the message to create a timestamp, and digitally signing the timestamp with a private key (Schneier: pages 75-78);

e) the control logic being further programmed to perform a published time source update by sending a request to the trusted external time source for a published time update, receiving a reply from the trusted external time source including the published time update, and updating the published time with the published time update if an update condition is satisfied, wherein the update condition is based in part on a time difference between the private time and the published time update (Hartman: Col 3, lines 2-7; Wepler: Col 5, line 1 to Col 7, line 34);

Wepler discloses a private time source in the form of a local running clock and indicating a private time (part a), a published time source in the form of a local running clock and indicating a published time (part b), at least one power supply arranged to power the private time source and the published time source (part c), and updating the published time with the published time update if an update condition is satisfied, wherein the update condition is based in part on a time difference between the private and the published time update (part e).

Wepler, however, does not disclose the use of timestamping in the system. More specifically, Wepler does not disclose control logic programmed to perform a time stamping operation by receiving a message, appending the published time to the message to create a timestamp, and digitally signing the timestamp with a private key (part d). Schneier discloses the limitations of the above and also teaches that timestamping data is useful, in systems that keep a time signal, to establish data authenticity. It would have been obvious to one of ordinary skill in the art at the time the invention was filed to combine the ideas of Schneier with those of Wepler and use the time capabilities in a timestamping operation because doing so is a useful means for establishing data authenticity.

Wepler in view of Schneier disclose all the limitations of the above claim, except for the limitation that the control logic sends a request to the trusted external time source for a published time update. The idea of requesting a time update from an external source is disclosed by Hartman. It would have been obvious to one of ordinary skill in the art at the time the invention was filed to combine the ideas of

Art Unit: 2137

Hartman with those of Wepler in view of Schneier because doing so allows the control logic to receive a time update in a system in which the time updates are not sent automatically.

As per claim 2, the applicant describes the trusted high stability time source of claim 1, which is met by Wepler in view of Schneier in further view of Hartman, with the following limitation which is met by Wepler:

A printed circuit board including a connector for connecting to a bus of a computer, wherein the private time source, the published time source, the at least one power supply, and the control logic are mounted to the printed circuit board (Wepler: Col 5, line 1 to Col 7, line 34).

10

As per claim 4, the applicant describes the time source of claim 1, which is met by Wepler in view of Schneier in further view of Hartman, with the following limitation which is met by Hartman:

Wherein the control logic is programmed to perform the published time source update at least once per month (Hartman: Col 3, lines 2-7).

As described by Hartman, the time updates can occur at any prescribed regular time interval.

15

As per claim 6, the applicant describes the high stability time source of claim 1, which is met by Wepler in view of Schneier in further view of Hartman, with the following limitation which is met by Wepler:

Wherein the control logic updates the published time with the published time update in an update manner that is based on a time difference between the published time and the published time update (Wepler: Col 5, line 1 to Col 7, line 34).

20

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Wepler in view of Schneier in further view of Hartman in further view of Esker, U.S. Patent No. 6,236,277.

25

Art Unit: 2137

As per claim 3, the applicant describes the time source of claim 1, which is met by Weppler in view of Schneier in further view of Hartman, with the following limitation which is met by Esker:

a) a first crystal oscillator configured to stabilize the private time source (Esker: Col 7, lines 3-11);

b) a second crystal oscillator configured to stabilize the published time source (Esker: Col 7, lines

5 3-11);

Weppler in view of Schneier in further view of Hartman disclose all the limitations of claim 1. However, Weppler in view of Schneier in further view of Hartman fail to disclose that the private time source and the published time source have crystal oscillators.

Esker discloses a time system in which a clock is stabilized by a crystal oscillator. It would have been obvious to one of ordinary skill in the art at the time the invention was filed to combine the ideas of Esker with those of Weppler in view of Schneier in further view of Hartman because using a crystal oscillator is a common way of efficiently maintaining a clock.

Claims 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Weppler in view of Schneier in further view of Hartman in further view of Watson, U.S. Patent No. 6,775,704.

As per claims 9 and 10, the applicant describes the time source of claim 1, which is met by Weppler in view of Schneier in further view of Hartman, with the following limitation which is met by Watson:

20       Wherein the update condition is further based on an elapsed time between sending the request and receiving the reply (Watson: Col 7, lines 29-32);

Weppler in view of Schneier in further view of Hartman disclose all the limitations of claim 1. However, Weppler in view of Schneier in further view of Hartman fail to disclose the idea that an update condition is based on an elapsed time between sending the request and receiving the reply.

25       Watson discloses this idea in which a message is checked to make sure that it was not sent more than 5 to 20 seconds after it is received. It would have been obvious to one of ordinary skill in the art at the time the invention was filed to combine the ideas of Watson with those of Weppler in view of Schneier

in further view of Hartman and incorporate the use of monitoring the elapsed time from when a request was sent to when the reply is received so that replay attacks do not occur.

Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Weppler in view of Schneider in further view of Hartman in further view of Terao, U.S. Patent No. 6,651,167.

As per claim 13, the applicant describes the trusted high stability time source of claim 1, which is met by Weppler in view of Schneier in further view of Hartman, with the following limitation which is met by Terao:

A tamperproof enclosure encapsulating the private time source, the published time source, and the control logic (Terao: Col 7, lines 2-11);

Weppler in view of Schneier in further view of Hartman disclose all the limitations of claim 1. However, Weppler in view of Schneier in further view of Hartman do not disclose that the enclosure encapsulating the private time source, the published time source, and the control logic is *tamperproof*. Terao discloses the idea of making an enclosure tamperproof. It would have been obvious to one of ordinary skill in the art at the time the invention was filed to combine the ideas of Terao with those of Weppler in view of Schneier in further view of Hartman and make the enclosure tamperproof because doing so makes the system more secure.

### ***Response to Arguments***

Applicant's arguments, see Remarks filed 9/19/05, with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

## Conclusion

**This action is made non-final.**

Art Unit: 2137

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Schubert whose telephone number is (571) 272-4239. The examiner can normally be reached on M-F 7:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,  
5 Emmanuel Moise can be reached on (571) 272-3865. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through  
10 Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
